Spartan Tilt Frame Assembly

Spartan roll-off equipment has become the standard of the industry, and with applications in the refuse hauling, scrap metal and construction-demolition industries, its overall versatility and usability are unquestioned. Since its founding, Spartan Truck Equipment has earned a reputation for quality workmanship and innovative leadership in the manufacture of tilt frame assemblies.

Ease of operation and maintenance are hallmarks of Spartan design. Parts and service are readily available.

Light bar arrangement is available with seat and side door regulations. Optional full fenders provide protection for both cab and containers.

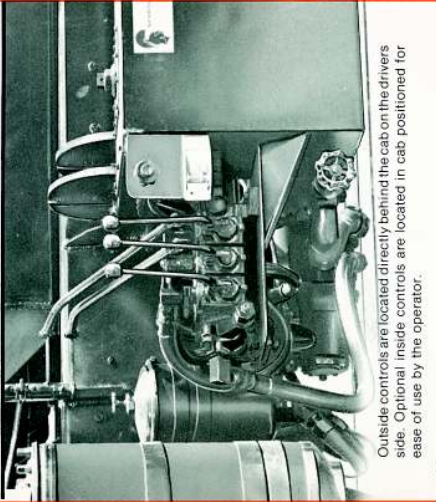

Trailer hitch mounting is designed for easy operation and access. Additional hydraulic valving is available for trailer operations.

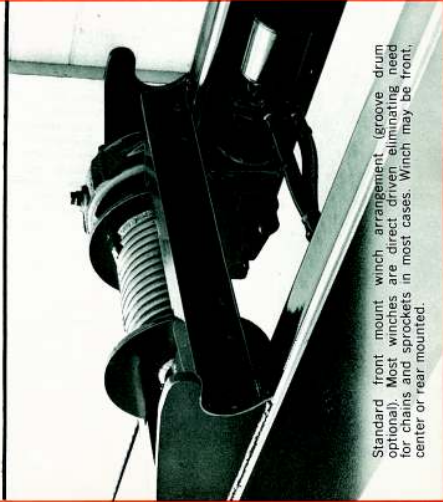

Optional hydraulic rear roller provides for maximum stability during loading and unloading operations.

5/2" ID double acting cylinders with a forward thrust raise rails to approximately 45 degree angle to facilitate loading and unloading of boxes.

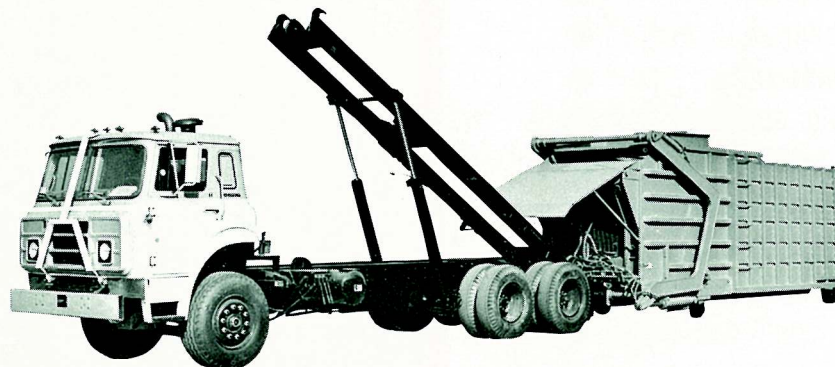

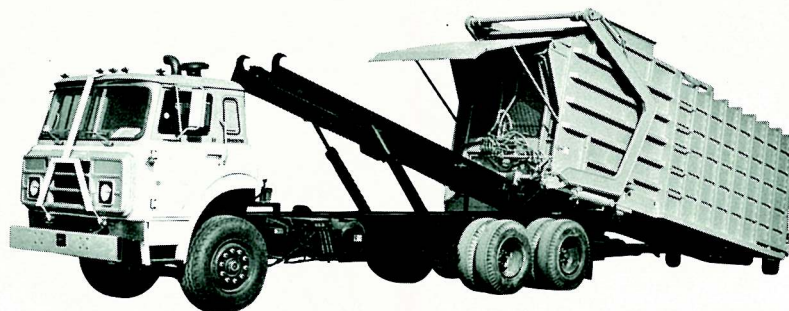

Outside controls are located directly behind the cab on the drivers side. Optional inside controls are located in cab positioned for ease of use by the operator.

Standard front mount winch arrangement (groove drum optional). Most winches are direct driven eliminating need for chains and sprockets in most cases. Winch may be front, center or rear mounted.

**For real versatility in the refuse industry
Spartan can turn your roll off truck into that
spare front loader you've been needing.**
